Optimal Interconnection Trees in the Plane: Theory, Algorithms and Applications (Algorithms and Combinatorics)

By Marcus Brazil, Martin Zachariasen

Optimal Interconnection Trees in the Plane: Theory, Algorithms and Applications (Algorithms and Combinatorics) By Marcus Brazil, Martin Zachariasen

This book explores fundamental aspects of geometric network optimisation with applications to a variety of real world problems. It presents, for the first time in the literature, a cohesive mathematical framework within which the properties of such optimal interconnection networks can be understood across a wide range of metrics and cost functions. The book makes use of this mathematical theory to develop efficient algorithms for constructing such networks, with an emphasis on exact solutions.

Marcus Brazil and Martin Zachariasen focus principally on the geometric structure of optimal interconnection networks, also known as Steiner trees, in the plane. They show readers how an understanding of this structure can lead to practical exact algorithms for constructing such trees.

The book also details numerous breakthroughs in this area over the past 20 years, features clearly written proofs, and is supported by 135 colour and 15 black and white figures. It will help graduate students, working mathematicians, engineers and computer scientists to understand the principles required for designing interconnection networks in the plane that are as cost efficient as possible.

Editorial Review

Review

"The book presents an interesting and quickly developing area of research and will be useful for researchers working in this area and for those wanting to learn more about geometric Steiner tree problems." (Yongtang Shi, Mathematical Reviews, December, 2015)

"The focus of this monograph is the geometric Steiner tree problem, i.e., how to optimally connect, in a geometric plane, a collection of n given terminals, together with an additional set of Steiner points, in terms of a measuring metric. … monograph is also intended as a textbook at a graduate level, thus comes with a decent collection of exercises, with varying difficulty degrees, at the end of each chapter, mostly assigned in a relevant context throughout the main text." (Zhizhang Shen, zbMATH 1319.05044, 2015)

From the Back Cover

This book explores fundamental aspects of geometric network optimisation with applications to a variety of real world problems. It presents, for the first time in the literature, a cohesive mathematical framework within which the properties of such optimal interconnection networks can be understood across a wide range of metrics and cost functions. The book makes use of this mathematical theory to develop efficient algorithms for constructing such networks, with an emphasis on exact solutions.

Marcus Brazil and Martin Zachariasen focus principally on the geometric structure of optimal interconnection networks, also known as Steiner trees, in the plane. They show readers how an understanding of this structure can lead to practical exact algorithms for constructing such trees.

The book also details numerous breakthroughs in this area over the past 20 years, features clearly written proofs, and is supported by 135 colour and 15 black and white figures. It will help graduate students, working mathematicians, engineers and computer scientists to understand the principles required for designing interconnection networks in the plane that are as cost efficient as possible.

About the Author

Marcus Brazil is Associate Professor and Reader at the Melbourne School of Engineering, The University of Melbourne, with a background in pure mathematics. He has worked on Steiner trees and network optimization problems for about 18 years, and has written more than 60 papers in this area, both on the theory of optimal network design and on industrial applications to Wireless Sensor Networks, Telecommunications, VLSI Physical Design, and Underground Mining Planning.

Martin Zachariasen is Head of Department and Professor at the Department of Computer Science, University of Copenhagen. He has worked on heuristics and exact methods for classical NP-hard problems, such as the geometric Steiner Tree Problem, as well as other optimization problems. His general research interests are in experimental algorithmics and computational combinatorial optimization, in particular related to VLSI design. As well as writing more than 40 papers on these topics, he is one of the developers of GeoSteiner, which is by far the most efficient software for solving a range of geometric Steiner tree problems.

Users Review

From reader reviews:

Barbara Baker:

Do you have favorite book? Should you have, what is your favorite's book? E-book is very important thing for us to learn everything in the world. Each reserve has different aim or even goal; it means that reserve has different type. Some people sense enjoy to spend their time for you to read a book. They are really reading whatever they take because their hobby is reading a book. Consider the person who don't like reading through a book? Sometime, person feel need book when they found difficult problem or perhaps exercise. Well, probably you will require this Optimal Interconnection Trees in the Plane: Theory, Algorithms and Applications (Algorithms and Combinatorics).

Carl Guerra:

What do you think of book? It is just for students since they are still students or this for all people in the world, what best subject for that? Just you can be answered for that problem above. Every person has distinct personality and hobby for each other. Don't to be obligated someone or something that they don't would like do that. You must know how great in addition to important the book Optimal Interconnection Trees in the Plane: Theory, Algorithms and Applications (Algorithms and Combinatorics). All type of book can you see on many sources. You can look for the internet solutions or other social media.

Abel Cooke:

Hey guys, do you would like to finds a new book to read? May be the book with the headline Optimal Interconnection Trees in the Plane: Theory, Algorithms and Applications (Algorithms and Combinatorics) suitable to you? The book was written by renowned writer in this era. The book untitled Optimal Interconnection Trees in the Plane: Theory, Algorithms and Applications (Algorithms and Combinatorics)is the one of several books this everyone read now. This book was inspired a number of people in the world. When you read this reserve you will enter the new dimension that you ever know just before. The author explained their thought in the simple way, therefore all of people can easily to be aware of the core of this guide. This book will give you a wide range of information about this world now. To help you see the represented of the world with this book.

Lester Baker:

That guide can make you to feel relax. This specific book Optimal Interconnection Trees in the Plane: Theory, Algorithms and Applications (Algorithms and Combinatorics) was colourful and of course has pictures on the website. As we know that book Optimal Interconnection Trees in the Plane: Theory, Algorithms and Applications (Algorithms and Combinatorics) has many kinds or variety. Start from kids until young adults. For example Naruto or Investigator Conan you can read and feel that you are the character on there. So , not at all of book are generally make you bored, any it offers you feel happy, fun and loosen up. Try to choose the best book to suit your needs and try to like reading that will.
