### Windows Server 2003 Security Infrastructures: Core Security Features (HP Technologies) By Jan De Clercq

Windows Server 2003 Security Infrastructures is a must for anyone that wants to know the nuts and bolts of Windows Server 2003 security and wants to leverage the operating system's security infrastructure components to build a more secure I.T. infrastructure. The primary goal of this book is to provide insights into the security features and technologies of the Windows Server 2003 operating system. It also highlights the security principles an architect should remember when designing an infrastructure that is rooted on the Windows Server 2003 OS.

- \*Explains nuts and bolts of Windows Server 2003 security
- \*Provides practical insights into how to deploy and administer secure Windows Server 2003 infrastructures
- \*Draws on the experience of a lead consultant in the Microsoft security area

### **Editorial Review**

#### Review

"In many companies Windows servers no longer just have to be integrated in an existing security infrastructure ; they make the security infrastructure. This shift means people need better understanding of security terminology, security requirements and product integration with the non-Microsoft world. Jan, with his deep and broad knowledge of both worlds (Windows and security), again provides excellent information on these topics." --Roland Schoenauen, CISSP, Banque Générale du Luxembourg

"Jan De Clercq's book is of critical importance for everyone who needs to design and implement security strategies in Windows Server 2003. It contains lots of details and gives answers to the 'why' and 'how' of the OS security. Based on real-world experience, this comprehensive book is full of the practical information so important for administrators in their every day jobs." --Vladimir Kaplan, Morgan Stanley Information Technology

"Windows Server 2003 was designed with security in mind. This book is a great addition to the prescriptive security guidance for Windows Server 2003 prepared by Microsoft. It is a must for every architect that is looking after implementing Windows Server 2003-rooted security infrastructures in its enterprise I.T. environment. " -- Andreas Luther, Program Manager Directory Services, Microsoft

#### About the Author

Jan De Clercq is one of HP's lead consultants in the space of Microsoft security. As a Senior Consultant, he is involved in many Windows implementations around the world and is a frequent speaker on the subject at Microsoft and general security conferences. In his HP Security Office member role he focuses on identity management. Jan is based in Belgium. He is co-author of Mission-Critical Active Directory (Digital Press, 2001).
