Graph-based Natural Language Processing and Information Retrieval By Rada Mihalcea, Dragomir Radev

Graph theory and the fields of natural language processing and information retrieval are well-studied disciplines. Traditionally, these areas have been perceived as distinct, with different algorithms, different applications and different potential end-users. However, recent research has shown that these disciplines are intimately connected, with a large variety of natural language processing and information retrieval applications finding efficient solutions within graph-theoretical frameworks. This 2011 book extensively covers the use of graph-based algorithms for natural language processing and information retrieval. It brings together topics as diverse as lexical semantics, text summarization, text mining, ontology construction, text classification and information retrieval, which are connected by the common underlying theme of the use of graph-theoretical methods for text and information processing tasks. Readers will come away with a firm understanding of the major methods and applications in natural language processing and information retrieval that rely on graph-based representations and algorithms.

Editorial Review

Review

"For the first time, a computational framework that unifies many algorithms and representations from the fields of natural language processing and information retrieval. This book is a comprehensive introduction to both theory and practice."

Giorgio Satta, University of Padua

About the Author

Rada Mihalcea is an Associate Professor in the Department of Computer Science and Engineering at the University of North Texas, where she leads the Language and Information Technologies research group. In 2009, she received the Presidential Early Career Award for Scientists and Engineers, awarded by President Barack Obama. She served on the editorial board of several journals, including Computational Linguistics, the Journal of Natural Language Engineering and Language Resources and Evaluations, and she co-chaired the Empirical Methods in Natural Language Processing conference in 2009 and the Association for Computational Linguistics conference in 2011. She has been published in IEEE Intelligent Systems, the Journal of Natural Language Engineering, the Journal of Machine Translation, Computational Intelligence, the International Journal of Semantic Computing and Artificial Intelligence Magazine.

Dragomir Radev is a Professor in the School of Information, the Department of Electrical Engineering and Computer Science, and the Department of Linguistics at the University of Michigan, where he is leader of the Computational Linguistics and Information Retrieval research group (CLAIR). He has more than 100 publications in conferences and journals such as Communications of the ACM, the Journal of Artificial Intelligence Research, Bioinformatics, Computational Linguistics, Information Processing and Management and the American Journal of Political Science, among others. He is on the editorial boards of Information Retrieval, the Journal of Natural Language Engineering and the Journal of Artificial Intelligence Research. Radev is an ACM distinguished scientist as well as the coach of the US high school team in computational linguistics.

Users Review

From reader reviews:

John Long:

Do you have favorite book? In case you have, what is your favorite's book? Publication is very important thing for us to know everything in the world. Each book has different aim or perhaps goal; it means that book has different type. Some people experience enjoy to spend their time and energy to read a book. These are reading whatever they acquire because their hobby is usually reading a book. What about the person who don't like examining a book? Sometime, man feel need book after they found difficult problem or exercise. Well, probably you should have this Graph-based Natural Language Processing and Information Retrieval.

Sandra Byrom:

This Graph-based Natural Language Processing and Information Retrieval book is just not ordinary book,

you have it then the world is in your hands. The benefit you have by reading this book will be information inside this e-book incredible fresh, you will get info which is getting deeper an individual read a lot of information you will get. This Graph-based Natural Language Processing and Information Retrieval without we realize teach the one who examining it become critical in thinking and analyzing. Don't always be worry Graph-based Natural Language Processing and Information Retrieval can bring whenever you are and not make your handbag space or bookshelves' turn into full because you can have it in your lovely laptop even mobile phone. This Graph-based Natural Language Processing and Information Retrieval having good arrangement in word and layout, so you will not truly feel uninterested in reading.

Carl Vang:

You are able to spend your free time to learn this book this publication. This Graph-based Natural Language Processing and Information Retrieval is simple to create you can read it in the park your car, in the beach, train in addition to soon. If you did not have much space to bring the actual printed book, you can buy often the e-book. It is make you much easier to read it. You can save the actual book in your smart phone. Therefore there are a lot of benefits that you will get when you buy this book.

John Gravatt:

Book is one of source of understanding. We can add our information from it. Not only for students but native or citizen need book to know the revise information of year to be able to year. As we know those guides have many advantages. Beside many of us add our knowledge, can also bring us to around the world. By book Graph-based Natural Language Processing and Information Retrieval we can take more advantage. Don't that you be creative people? To become creative person must choose to read a book. Merely choose the best book that ideal with your aim. Don't always be doubt to change your life at this book Graph-based Natural Language Processing and Information Retrieval. You can more inviting than now.
