

Skyrmions: Topological Structures, Properties, and Applications (Series in Materials Science and Engineering)

From CRC Press

Skyrmions: Topological Structures, Properties, and Applications (Series in Materials Science and Engineering) From CRC Press

"The book reviews all the aspects of recent developments in research on skyrmions, from the presentation of the observation and characterization techniques to the description of physical properties and expected applications. It will be of great use for all scientists working in this field." – Albert Fert, 2007 Nobel Laureate in Physics (from the Foreword)

A skyrmion is a tiny region of reversed magnetization – quasiparticles since they are not present except in a magnetic state, and also give rise to physics that cannot be described by Maxwell's equations. These particles are fascinating subjects for theoretical and experimental studies. Moreover, as a new type of magnetic domain structure with special topological structures, skyrmions feature outstanding magnetic and transport properties and may well have applications in data storage and other advanced spintronic devices, as readers will see in this book. Chapters address the relationships between physical properties of condensed matter, such as the AB effect, Berry phase effect, quantum Hall effect, and topological insulators. Overall, it provides a timely introduction to the fundamental aspects and possible applications of magnetic skyrmions to an interdisciplinary audience from condensed matter physics, chemistry, and materials science.

Editorial Review

About the Author

J. Ping Liu received his Ph.D. in Applied Physics at the Van Der Waals – Zeeman Institute, the University of Amsterdam, the Netherlands. He is currently a Distinguished Professor in the Department of Physics at the University of Texas at Arlington, USA and an Adjunct Professor at the Ningbo Institute of Materials Technology and Engineering, China. He is a Fellow of American Physical Society. His current research work is focused on nanostrucutred magnetic materials. He has organized and led several joint research programs in nanocomposite magnets supported by federal agencies including DOD/DARPA and DOD/MURI. He has authored or coauthored more than 220 peer-reviewed publications, including review articles, book chapters and a book. He has supervised more than fifty postdoctoral researchers and graduate students. He has organized and chaired numerous symposia and conference sessions including a symposium on Skrmions in July 2014 at Ningbo, China. Dr. Liu is the lead editor of Springer book "Nanoscale Magnetic Materials and Applications" (2009, among the top 20% most downloaded Springer text books).

Zhi-dong Zhang received his B.S. degree in the department of Physics, Nanjing University and his Ph.D degree in the Institute of Metal Research (IMR), Chinese Academy of Sciences. He is a full Professor of IMR and the head of Magnetism and Magnetic Materials Division since 1995. Dr. Zhang has been engaged in research on the fields of magnetism and magnetic materials and also condensed matter physics, including in the light rare-earth giant magnetostrictive materials, the magnetic nanocapsules, the nanocomposite magnetic thin films, the magnetocaloric materials and the theoretical work on Bose-Einstein Condensates and superfluids. Recently, he focused his interest in topological structures in magnetic materials, such as vortex and skyrmion, and their dynamical behaviors and resonant excitations. He has published more than six hundred papers in international journals, including eleven invited review articles.

Guoping Zhao received his B.S and the Ph.D. Degrees in Physics from the University of Science and Technology of China and National University of Singapore (NUS), respectively. He worked in NUS from 2000 to 2004. Since 2004, he has been a professor and distinguished professor in Sichuan Normal University (SICNU). Prof. Zhao is the leader of the Scientific Research Innovation Team for Physics and the founder and director of the Magnetic Materials Lab, SICNU. He is the author or the coauthor of more than 60 SCI papers published in international journals and referred conferences. Since 2006, Prof. Zhao has been invited as a visiting scientist to work in Singapore and Australia for eight times (25 months in total). He is an active researcher in fundamental issues in magnetism and magnetic materials including coercivity mechanism, magnetic domain structures (including Skyrmion) and exchange coupling.

Users Review

From reader reviews:

Samual Larkin:

The reserve with title Skyrmions: Topological Structures, Properties, and Applications (Series in Materials Science and Engineering) possesses a lot of information that you can study it. You can get a lot of advantage after read this book. This specific book exist new understanding the information that exist in this guide represented the condition of the world at this point. That is important to yo7u to know how the improvement

of the world. This specific book will bring you throughout new era of the glowbal growth. You can read the e-book on your own smart phone, so you can read it anywhere you want.

Herbert White:

A lot of people always spent their particular free time to vacation as well as go to the outside with them family or their friend. Do you know? Many a lot of people spent many people free time just watching TV, or maybe playing video games all day long. If you would like try to find a new activity here is look different you can read any book. It is really fun for yourself. If you enjoy the book that you just read you can spent the entire day to reading a reserve. The book Skyrmions: Topological Structures, Properties, and Applications (Series in Materials Science and Engineering) it is very good to read. There are a lot of people who recommended this book. These folks were enjoying reading this book. If you did not have enough space to bring this book you can buy the e-book. You can m0ore quickly to read this book from the smart phone. The price is not very costly but this book offers high quality.

Coralee Lowe:

Skyrmions: Topological Structures, Properties, and Applications (Series in Materials Science and Engineering) can be one of your beginning books that are good idea. We recommend that straight away because this book has good vocabulary that may increase your knowledge in terminology, easy to understand, bit entertaining but nonetheless delivering the information. The copy writer giving his/her effort that will put every word into joy arrangement in writing Skyrmions: Topological Structures, Properties, and Applications (Series in Materials Science and Engineering) nevertheless doesn't forget the main stage, giving the reader the hottest as well as based confirm resource information that maybe you can be certainly one of it. This great information can drawn you into completely new stage of crucial pondering.

George Tucker:

As a university student exactly feel bored to help reading. If their teacher requested them to go to the library or make summary for some publication, they are complained. Just tiny students that has reading's heart or real their passion. They just do what the instructor want, like asked to the library. They go to at this time there but nothing reading significantly. Any students feel that looking at is not important, boring in addition to can't see colorful photographs on there. Yeah, it is to be complicated. Book is very important for you. As we know that on this period, many ways to get whatever you want. Likewise word says, many ways to reach Chinese's country. So, this Skyrmions: Topological Structures, Properties, and Applications (Series in Materials Science and Engineering) can make you truly feel more interested to read.
