Opto-Mechanical Systems Design, Fourth Edition, Two Volume Set By Paul Yoder, Daniel Vukobratovich

Opto-Mechanical Systems Design, Fourth Edition is different in many ways from its three earlier editions: coauthor Daniel Vukobratovich has brought his broad expertise in materials, opto-mechanical design, analysis of optical instruments, large mirrors, and structures to bear throughout the book; Jan Nijenhuis has contributed a comprehensive new chapter on kinematics and applications of flexures; and several other experts in special aspects of opto-mechanics have contributed portions of other chapters. An expanded feature—a total of 110 worked-out design examples—has been added to several chapters to show how the theory, equations, and analytical methods can be applied by the reader. Finally, the extended text, new illustrations, new tables of data, and new references have warranted publication of this work in the form of two separate but closely entwined volumes.

The first volume, **Design and Analysis of Opto-Mechanical Assemblies**, addresses topics pertaining primarily to optics smaller than 50 cm aperture. It summarizes the opto-mechanical design process, considers pertinent environmental influences, lists and updates key parameters for materials, illustrates numerous ways for mounting individual and multiple lenses, shows typical ways to design and mount windows and similar components, details designs for many types of prisms and techniques for mounting them, suggests designs and mounting techniques for small mirrors, explains the benefits of kinematic design and uses of flexures, describes how to analyze various types of opto-mechanical interfaces, demonstrates how the strength of glass can be determined and how to estimate stress generated in optics, and explains how changing temperature affects opto-mechanical assemblies.

The second volume, **Design and Analysis of Large Mirrors and Structures**, concentrates on the design and mounting of significantly larger optics and their structures, including a new and important topic: detailed consideration of factors affecting large mirror performance. The book details how to design and fabricate very large single-substrate, segmented, and lightweight mirrors; describes mountings for large mirrors with their optical axes in vertical, horizontal, and variable orientations; indicates how metal and composite mirrors differ from ones made of glass; explains key design aspects of optical instrument structural design; and takes a look at an emerging technology—the evolution and

applications of silicon and silicon carbide in mirrors and other types of components for optical applications.

Editorial Review

Review

"This is a great starting point and reference tool for engineers coming into this field. ...it gives a concise review of metal mirrors identifying the key design and manufacturing practices that have been developed across the industry through the past two decades. The extensive list of references provides original source data for further reading on any topic."

?Dr. Alan R. Hedges, II-VI Incorporated

"... [the previous edition] is my go-to reference for all things optomechanics, so I anticipate the new edition will get just as much use. ... The large number of illustrations, real-world examples, material property data, and additional references make this an excellent resource for any practicing optomechanical engineer."

?Katie Schwertz, Edmund Optics

"... main strength of this book is very comprehensive coverage of the key optomechanical design concepts and analytical methods that can be applied directly in the design and development of simple to very complex optical system. The information is easy to understand and therefore easy to customize and apply to new optical systems or instruments being developed. It is rare to find such a wealth of knowledge about many related topics in a single book."

?Anees Ahmad, Raytheon Missile Systems & College of Optical Sciences, University of Arizona, Tucson, USA

"... an industry standard in the field of Opto-mechanical design for many years. A must for mechanical engineers involved in mounting and design of high acuity optical systems."

?John Pepi, L-3 Communications SSG

"... a great reference book which covers many interesting topics and technologies which are practical and applicable to high precision optical systems."

?Myung Cho, National Optical Astronomy Observatory (NOAO)

"... probably the most comprehensive, detailed, and up-to-date text on opto-mechanics."

Professor Nathan Kopeika

About the Author

Paul Yoder (BS physics, Juniata College, Huntingdon, Pennsylvania, 1947, and MS physics, Penn State University, University Park, Pennsylvania, 1950) learned optical design and opto-mechanical engineering at the U.S. Army's Frankford Arsenal (1951–1961). He then applied those skills at Perkin-Elmer Corporation (1961–1986) and served the optical community as a consultant in optical and opto-mechanical engineering (1986–2006). A fellow of the OSA and SPIE, Yoder has authored numerous chapters on opto-mechanics, published more than 60 papers, been awarded 14 U.S. and several foreign patents, and taught more than 75 short courses for SPIE, U.S. government agencies, and industry.

Daniel Vukobratovich is senior principal multidisciplinary engineer at Raytheon Systems, Tucson, Arizona,

and adjunct professor at the University of Arizona. He has authored more than 50 papers, taught short courses in opto-mechanics in 12 different countries, and consulted for more than 40 companies. A SPIE fellow, he is a founding member of the opto-mechanics working group. He holds international patents and received an IR-100 award for work on metal matrix composite optical materials. He led development on a series of ultra-lightweight telescopes using new materials, and worked on space telescope systems for STS-95, Mars Observer, Mars Global Surveyor, and FUSE.

Users Review

From reader reviews:

Blair Kennedy:

Now a day people who Living in the era everywhere everything reachable by connect with the internet and the resources included can be true or not require people to be aware of each info they get. How people have to be smart in getting any information nowadays? Of course the answer then is reading a book. Looking at a book can help men and women out of this uncertainty Information especially this Opto-Mechanical Systems Design, Fourth Edition, Two Volume Set book as this book offers you rich info and knowledge. Of course the knowledge in this book hundred per-cent guarantees there is no doubt in it you probably know this.

Andrea Winburn:

Spent a free time to be fun activity to accomplish! A lot of people spent their leisure time with their family, or their friends. Usually they doing activity like watching television, planning to beach, or picnic inside park. They actually doing same task every week. Do you feel it? Do you wish to something different to fill your own personal free time/ holiday? Could possibly be reading a book is usually option to fill your free of charge time/ holiday. The first thing you ask may be what kinds of reserve that you should read. If you want to try look for book, may be the book untitled Opto-Mechanical Systems Design, Fourth Edition, Two Volume Set can be fine book to read. May be it could be best activity to you.

Ernesto Harrell:

The book untitled Opto-Mechanical Systems Design, Fourth Edition, Two Volume Set contain a lot of information on this. The writer explains the girl idea with easy technique. The language is very clear to see all the people, so do not necessarily worry, you can easy to read this. The book was published by famous author. The author will take you in the new period of time of literary works. You can read this book because you can read more your smart phone, or product, so you can read the book with anywhere and anytime. In a situation you wish to purchase the e-book, you can wide open their official web-site along with order it. Have a nice go through.

Joseph Levis:

As a pupil exactly feel bored to be able to reading. If their teacher inquired them to go to the library or to make summary for some e-book, they are complained. Just minor students that has reading's spirit or real their interest. They just do what the trainer want, like asked to go to the library. They go to right now there

but nothing reading very seriously. Any students feel that reading is not important, boring and also can't see colorful pictures on there. Yeah, it is being complicated. Book is very important to suit your needs. As we know that on this time, many ways to get whatever you want. Likewise word says, many ways to reach Chinese's country. Therefore , this Opto-Mechanical Systems Design, Fourth Edition, Two Volume Set can make you experience more interested to read.
